## PRICE MEETS PERFORMANCE

The Vector 150 is a quality and economical booth made for performance and durability. This booth was created for start-up and small shops looking for a great performing, yet economical booth. As seen on the left, air enters the booth through the top-front filtered plenum and is exhausted at the rear-center plenum

## TRUCK XLR

**Truck XLR**, air enters the booth through the top-front filtered plenum and is exhausted at the rear-center plenums. The same boost power technology that runs the Semi-Down 200 can be found in this giant workhorse.

## GREATER PERFORMANCE

Looking for a boost in booth performance? The Delta 250 is the answer for shops that are looking to get a faster turn-around. Compared to the 150 series, the 250 has a 10% increase in airflow CFMs and a 30% increase in horsepower! As seen on the left, air enters the booth through the fully-filtered ceiling plenum and is then exhausted at the lower side plenums.

SAVE TIME AND MONEY

## DELTA PREP 250

Delta Prep 250, air enters the prep-station through the fully-filtered ceiling plenum and is then exhausted at the lower side exhaust plenums. The same great power that runs the Side Down 100 can be found in this economical option.

LENGTH 24'

## MAXIMUM PERFORMANCE

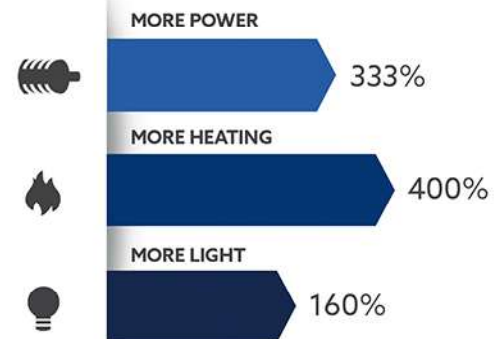

The Stealth 350 is our highest-performance and most efficient booth. With a 333% increase in horsepower, compared to the 250 series, this makes the Stealth 350 our fastest performing booth. And don't forget the 60% increase in lighting, for that detailed perfection. Lastly, the 1,000,000 BTU heater will expedite your drying cycle by 400% (as opposed to chemicals)! As seen on the left, air enters the fully-filtered ceiling plenum and is exhausted through the filtered floor plenum.

## THE 350 DIFFERENCE

In business time is money. By dramatically increasing your power and heat cycle, you will be able to increase your turn-around dramatically. Not only are you saving on time, but also on labor and energy costs. The daily cost of booth operation is lowered tremendously when compared to the increased number of vehicles you can turn-around in one day, compared to a lower-end booth. So in the end, you get faster performance and turn-around at a lower energy consumption cost per vehicle. In business, lowering your overhead and labor is always the key to success.

\*COMPARED TO THE 250 SERIES

## CUREZONE / LOWnox

**CureZone** has the power to increase the speed of your bake cycle by over 400%, compared to standard chemicals. Get cars out in a matter of hours instead of days. Renders ultra smooth, high-quality gloss finish as opposed to the unfavorable orange-peel texture.

|                |  |
|----------------|--|
| INSTALLATION   | INDOOR or OUTDOOR                      |
| CONFIGURATIONS | VERTICAL, HORIZONTAL, SUSPENDED, MOUNT |
| BTUs           | 400,000 - 1,000,000 / 2,500,000        |
| SPRAY TEMP     | 55 - 90 DEGREES                        |
| BAKE TEMP      | 90 - 160 DEGREES                       |
| MOTOR          | V.F.D. POWER                           |

## OPEN FACE

**Open Face** is efficiently made to save space and time. It is ideal for painting smaller parts, or projects. They are available in all sizes and for every industry, such as woodwork, jamming, or powder-coating. The booth intakes air through the open face and exhausted through a filter system in the rear.

|            |                      |
|------------|----------------------|
| LIGHTING   | 2 UPPER              |
| FILTRATION | 26 EXHAUST           |
| AIRFLOW    | 12,900 CFM           |
| FAN        | 30" TUBE AXIAL       |
| MOTOR      | (1) - 3HP-3PH (240v) |

Based on model RGI-IOF 101010

## MIXING LAB

**Mixing Lab** allows shops to safely mix and store their own paints according to state regulations and laws. Air enters the booth through the fully filtered ceiling plenum, and is exhausted at the lower, side, exhaust plenums.

|            |                              |
